DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1, 4-6 and 9 rejected under 35 U.S.C. 102(e) as being anticipated by Schrierer et al. (US 6,742,779).

Schrierer et al. (US 6,742,779) discloses method steps for sucking of claims 1 and 4 at (column 2 lines 4-40).

A sheet removing/sucking device (abstract), cups (9), source or vacuum pump (12), controlling device (14), suction controlling sequence found (column 2 lines 4-40), conduit (13) and applicability (abstract).

Allowable Subject Matter

3. Claims 2, 3, 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: A sucking/removing method having all of the limitations of claims 1 and 2 in combination with the step of opening the suction devices to atmospheric pressure at the start of each cycle of sucking or sensing the both negative pressures with a sensor to control the vacuum pump, or a sucking/removing device having all of the limitations of claims 5 and 6 in combination with an electromagnetic two way type valve and a variable throttle valve is not found nor is sufficient motivation to make the combination in the art of record.
